Response to Arguments

1. Applicant's arguments with respect to claims 1-20 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1,6-13 and 17-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Dutta et al. (Pub. No.: US 2006/0221230 A1)

The applied reference has a common assignee (NOKIA) with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

In regard to claim 1, Dutta provides for a method of processing an image captured by a mobile camera telephone (Fig.3 note mobile camera telephone), said method comprising: digitizing the image to obtain Bayer data (Fig.3 element 28, Para.18

Application/Control Number: 10/611,473

Art Unit: 2624

lines 4-6, note image sensor 12 and ADC digital output 11 is a Bayer data); processing the Bayer data to obtain image data (Fig.3 element 26b, Para.19 note the image processing block 26b, to produce image data 13); and extracting raw data from the image data (Fig.3 element 26b, Para.19 note the image processing block 26b, to produce image data 13, note the bayer data 11, first need to be stored, in storage devices such as element 2 or 4 in fig. 3, then producing image 13, by processing element 26b corresponds to extracting the raw data see para.19).

As to claim 6, Dutta provides for a method, wherein the mobile camera telephone includes a camera module and a telephone module (Fig.2 note camera module/ phone system).

In regard to claim 7, Dutta provides for a method, wherein the step of processing the Bayer data is performed within the camera module (Fig.3 element 26b, Para.19 note camera image processing block 26b).

As to claim 8, Dutta provides for a method, wherein the extracting the raw data is performed in the telephone module (Fig.3 data 11 transmitted to element 26, for storage (elements 2 and 4) and processing (element 26b) producing image 13, by processing element 26b corresponds to extracting the raw data see para.19).

With regard to claims 9 and 18 Dutta provides for a method, further comprising of storing the image data in the telephone module prior to the extraction step (Fig.4 element 2, note storage device SDRAM).

In regard to claim 10, Dutta provides for a method, further comprising; encoding

Art Unit: 2624

the image data (Para. 28, Fig.5, element 32); and decoding the encoded image data (Fig.5 element 34); wherein the encoding and decoding are performed prior to the extraction step (Para.28 Fig.5 element 2, note storage device SDRAM 2, note for displaying the image data, the raw data or image component (RGB) need to be extracted).

With regard to claims 11 and 17, Dutta provides for a method, wherein the encoding is performed according to a JPEG standard (Para. 16, note JPEG).

As to claim 12, Dutta provides for a method, further comprising creating an EXIF file including the JPEG encoded image data and shooting data (Para.16 note JPEG and TIFF, which corresponds to EXIF file).

In regard to claim 13, see the rejection of claim 1. It recites similar limitations as claim 1. Except that claim 13 is a system and claim 1 is a method. Hence it similarly analyzed and rejected.

As to claim 19, see the rejection of claim 1; it recited similar limitations as claim 1. Except for an interface for receiving digitized Bayer data associated with a captured image from an image capturing device (Fig.4 element 27, Para.24 see interface 27. Hence it similarly analyzed and rejected.

With regard to claim 20, Dutta provides for the mobile camera telephone, wherein the image data is RGB data (Para. 18, note RGB color data).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2624

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2-5 and 14-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dutta et al. (US 2006/0221230 A1) in view of Silverbrook et al. (US 6,831,682).

In regard to claim 2, Dutta provides for the extracted data (Fig.4, note the output 11 of camera module 28, which is the raw data, directed toward the camera image processing element 26b). Dutta does not transmit the extracted data to a device external to the mobile camera telephone. Silverbrook transmit the extracted data to external device (col.44 lines 36-42, note photos taken by digital camera "squirt" the photos to the receptive devices such as fixed or mobile netpage printer). One in the art would have been motivated to modify Dutta according to Silverbrook to ("this may be particularly convenient when the photo user may choose to defer printing of photos while traveling, and instead retrieve and print the photos on returning home, e.g. in the form of printed pages suitable for inclusion in a normal photo album" col.44 lines 52-61) and therefore it would have obvious to one of the ordinary skill in the art to modify Dutta according to Silverbrook.

With regard to claims 3-4, 5 and 14-16 see the rejection of claim 2. They recite similar limitations as claim 2. Hence they are similarly analyzed and rejected.

Contact Information

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ali Bayat whose telephone number is 571-272-7444. The examiner can normally be reached on M-F 9:00 AM-5:00 PM.

Application/Control Number: 10/611,473

Art Unit: 2624

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jingge Wu can be reached on 571-272-7429. The fax phone number for the

Page 6

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
